FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

Continuation of Box II.2

Claims Nos.: 8

Claim 8 is directed to a composite material obtainable by a process which involves a first heating step, a second illumination step and a third cooling step. The first and third steps cause a phase transition of the liquid crystal from the nematic to the isotropic phase (by heating) and back to the nematic phase (by cooling): therefore, the first and third steps constitute a reversible process. However, as they take place with an accompanying temperature change, they are not isothermal. The illumination step, on the contrary, is carried out at constant temperature (see the description, p. 4) and is therefore isothermal; however, as it induces a polymerisation, which is irreversible, the second step is an irreversible process, too. As the description does not describe any other process or transition which is isothermal and reversible at the same time, as claimed in claim 8, it is not understandable which kind of transition should be searched. Furthermore, the expression "nematic isotropic phase" is meaningless, because a liquid crystal exists either in a nematic phase or in an isotropic phase.

Therefore, no meaningful search is possible for the subject-matter of the dependent claim 8.

The applicant's attention is drawn to the fact that claims relating to inventions in respect of which no international search report has been established need not be the subject of an international preliminary examination (Rule 66.1(e) PCT). The applicant is advised that the EPO policy when acting as an International Preliminary Examining Authority is normally not to carry out a preliminary examination on matter which has not been searched. This is the case irrespective of whether or not the claims are amended following receipt of the search report or during any Chapter II procedure. If the application proceeds into the regional phase before the EPO, the applicant is reminded that a search may be carried out during examination before the EPO (see EPO Guideline C-VI, 8.5), should the problems which led to the Article 17(2) declaration be overcome.

tional application No. PCT/IB2004/051174

Box II	Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)					
This international Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:						
1.	Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely:					
2. X	Claims Nos.: 8 because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically: see FURTHER INFORMATION sheet PCT/ISA/210					
з. 🗌	Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).					
Box III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)						
This Inte	rnational Searching Authority found multiple inventions in this international application, as follows:					
1.	As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.					
2.	As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.					
3.	As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:					
4.	No required additional search fees were timely paid by the applicant. Consequently, this international Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:					
Remark	on Protest The additional search fees were accompanied by the applicant's protest. No protest accompanied the payment of additional search fees.
